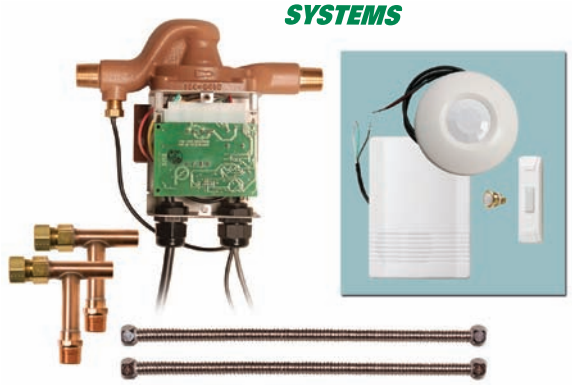
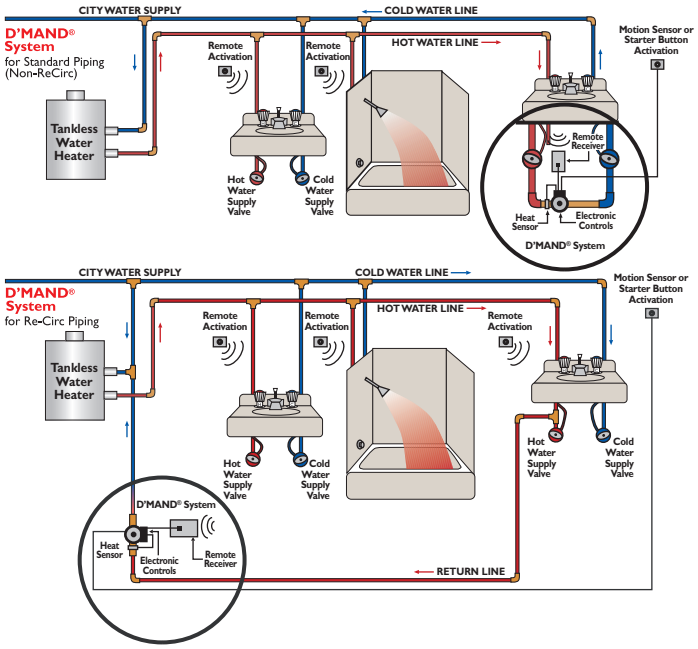
D'MAND® SYSTEMS





If you're going tankless... Go D'MAND®

Leading tankless water heater manufacturers now recommend use of their products with a quality on-demand water recirculation system like Taco's D'MAND® System. In fact, some of those manufacturers may reduce the warranty coverage period if their product is used with a conventional timer-controlled recirculation system. Conventional water recirculation systems fitted with temperature sensors and timers are not considered "on demand"...that's why choosing the Taco D'MAND® is always the right choice.

D'MAND® eliminates the need for a conventional recirculation system, and has been engineered to provide the head pressure needed to overcome the high pressure drops experienced with tankless water heaters.

D'MAND® pumping systems have been approved for EPA Energy Star water heating credits.

D'MAND® delivers instant hot water by push button or motion sensing – not by temperature sensor or a timer. There are no standby losses, no stack losses and no need for extra storage tanks.

D'MAND® SYSTEM — On demand Water Recirculation System with Patented ACT D'Mand® Electronics Control Board

Product Number	Connection Sizes	Motor			Ship Weight
		Voltage	RPM	HP	
008-DM	1/2" Male NPT	115/60/1	3250	1/25	10
